Lemon Catalog

Yubileyniy

Description: It is reminiscent of "Pandroza" in appearance and features. Shrub short, usually no more than 2.5 m. The leaves are dark green, large and thick. Up to 15 large white flowers are collected in a cluster. Yields in 2-3 years. The fruit is elongated, the skin is thick, and the "Jubilee" variety is not as capricious as most of its contemporaries. Even in conditions of insufficient air and soil moisture, the crop will run out. Very convenient for amateurs. It contains 6.5-7.0% acid, 2.5% sugar, 4.0% pectin, 70-80mg% C and various vitamins.

Weight: average 800-1500 g.

Yield: 250-300 cwt/ ha.

Ripening period: October-November.

Creation: In Uzbekistan, in 1966 by selection scientist Z.Fakhrutdinov.

Distribution: Tashkent, Andijan, Namangan, Fergana, Bukhara, Navoi.

Lemon Catalog

Meyer

Description: Meyer is a natural hybrid derived from mixing oranges with fresh lemons. The variety is a weak-growing tree, with little or no thorns. Yields 2-3 years. The growth period of the variety is 220-240 days, the plant size is 2-2.5 m, the advantage of the variety is that it is quick to harvest and productive.

The fruits are of various shapes, oval, round or noxious, of medium or large size. The fruits do not keep long. The variety gives a rich harvest in the year. The most valuable medicinal and refreshing fruit is obtained. It contains 2% acid sugar, 6-8% various acids (mainly citric acid), more than 1% pectin, 0.5% various miscellaneous mineral salts, 60-90 mg /% vitamin C, contains a certain amount of vitamins A, B1, B2 and PP. Lemons retain their vitamins well, even when stored and processed for a long time, which is its valuable feature.

Weight: 80-100 g.

Yield: 200-250 cwt/ ha, for per bush 22-25 kg.

Ripening period: October.

Creation: China

Lemon Catalog

Tashkent

Description: Medium-sized, deciduous, pyramidal branches. The leaves are large, ovoid, the flowers are small. The thorns are few, yielding in 2-3 years.
