Walnut Catalog

Fernor

French type. Medium-sized late flowering, late ripening variety. High quality of fruit and berries. The size of the fruit is moderate (10-13 g). The tree grows upright. The bark is light brown. The leaves are elongated, broad at the base and narrow at the tip, growing in the form of an elongated bucket. The fruits are light, medium-sized, elongated-oval, suitable for long-term transport. Fernor coconut is slightly larger than the famous French Franquette coconut. Size - 30 - 32 mm. The shell of the walnut is of medium thickness, the wings are well fastened, light in color, easily separated without damaging the core. The core is easily separated, white, well-filled, has a very high taste. Fruiting begins at the age of 6-8 years. Yields, in the best fruiting years (15 - 20 years), 100 - 120 kg per tree. Maturation period- the end of September.

Walnut Catalog

Chandler

(THE USA VARIETY) - Medium-sized, lateral branches, large (13-15 g), medium-ripe. The quality of peeled or unpeeled nuts is high. The tree is given the desired cup-shaped shape, suitable for outward in a medium or small specific area.

Walnut Catalog

Yubileyniy

It was created at the Bostanlyk mountain research and experimental station of the Research Institute of Horticulture, Viticulture and Enology named after Academician M. Mirzaev. Across the country Included in the State Register. The walnut tree is tall, the fruit is flat round, light green in color. Nuts are large, average weight - 12.3 g. The taste rating of the fruit at the time of ripening is 4.7 points. The core is sweet, oily, the peel is easily separated. According to the Institute's Bostanlyk mountain research and experimental station, 28.6 kg of fruit was harvested from the 11-year-old tree.

Walnut Catalog

Tonkoskorlupy

It was created at the Bostanlyk mountain research and experimental station of the Research Institute of Horticulture, Viticulture and Enology named after Academician M. Mirzaev. It is included in the State Register of Andijan, Jizzakh, Kashkadarya, Namangan, Samarkand, Surkhandarya, Syrdarya, Tashkent and Fergana regions.

The walnut tree is tall, the branches are broadly spherical in shape, the core is sweet, oily. The fruit is broadly ovate, light green, of medium weight, and begins to bear fruit in the sixth year after planting. According to the Bostanlyk mountain research and experimental station of the Research Institute of Horticulture, Viticulture and Enology named after Academician M. Mirzaev, 3.3 kg of eight-year-old trees and 12-13 kg of ten-year-old trees were harvested.

Walnut Catalog

Ideal

It was created at the Bostanlyk mountain experimental station of the Research Institute of Horticulture, Viticulture and Enology named after Academician M. Mirzaev. It is included in the State Register for all regions except Syrdarya.

The walnut tree is tall, with broad ovate branches. After planting the seedlings enter the crop very early, the first year begins to bear fruit. The shape of the nut is flat-round, the taste value at the time of ripening of the fruit - 4.6 points. According to the Institute's Bostanlyk mountain research station, 3.3 kg of eight-year-old trees and 12-13 kg of ten-year-old trees were harvested.

Walnut Catalog

Bostonlyk

It was created at the Research Institute of Horticulture, Viticulture and Enology named after Academician M.Mirzaev. All regions, except Syrdarya, are included in the State Register of Production.

The large height of the walnut tree allows it to bear fruit in the fourth year after planting. The nut is large, broadly ovoid. It differs from other new ones by its resistance to new colds and various diseases. According to the data obtained from the Bostanlyk direct research station of the Research Institute of Horticulture, Viticulture and Enology named after Academician M. Mirzaev, 7.5 kg of 15-year-old tree, eight-year-old 10 kg of fruit was harvested from the tree.
